2.12 E. Schulte Nordhold, Statistics Netherlands, “The Analysis of Poverty Spells”
2.13 Alejandro Estruch-Manjón, University of Barcelona, Spain, “Three Income Distributions in Spain”
2.14 Jens Bonke, Danish National Institute of Social Research, “Equality and Specialization in Household Production”
2.15 Roger Clarke, Cardiff Business School, U.K., “Recent Trends in Industrial Concentration in the U.K.”
The Hungarian Central Statistical Office and the International Association for Research in Income and Wealth are proud to be joint publishers of a commemorative volume of the works of László Drechsler, former Chairman of the Association.

The papers published in the memorial volume relate, directly or indirectly to national accounting methodology. The potential application to national accounting principles and methods seems, however, almost to know no bounds and this is reflected in the range of topics covered; comparative studies of accounting systems, price and volume changes over time and between countries, issues concerning the environment and the service sector.

Copies of the volume are available at or can be ordered from: Central Statistical Office Library and Documentation Service (KSH Kőnyvtár és Dokumentációs Szolgálat), Keleti Károly u.5., Budapest 1024, Hungary. Price: HUF 600 (VAT included), i.e. US $5, plus postage.
